

**What is the first step to understanding how solar will work for you?**

**Get a Preliminary Solar Proposal**

**What's in a proposal and what will it do for me?**

A quality proposal should **educate** and **inform** you. The proper elements will answer common questions and help you set a budget. You should have a clear idea of how you will save:

- It must be specific to your house - a generic proposal will miss many details
- It itemizes and details component brands and specifications
- You get a complete financial picture
- It spells out initial yet specific performance targets
- It should not require any commitment from you.

**A Professional Proposal**

**The Exact Solar Satellite Survey**

Our high quality first proposal has been refined through years of experience. We use the best remote satellite technology. Over **90%** of our customers' final contracts incorporate this design with little change. We consider the following:

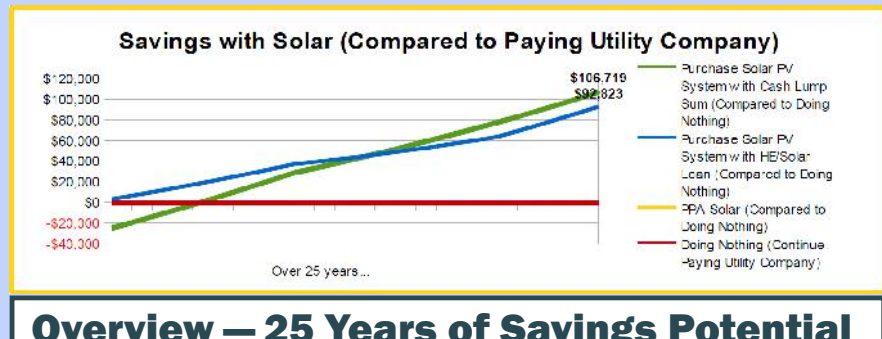

- *The directional orientation of your home.*
- *Any shading and remedies if needed.*
- *An exact layout and mention of all roofing surfaces to be used.*
- *A preliminary assessment of the condition of your roof.*

**Exact Solar Proposal Details**

Our aim is to give you honest and accurate information the first time around. A proposal includes the following:

- ✓ A list of all power components from our top tier suppliers and a preliminary visual showing the panel layout.
- ✓ **Honest lifetime production estimates** based on our design, your local conditions, and the manufacturers' anticipated wear and tear changes. This is typically about a 0.5% decrease in output per year.
- ✓ An itemized estimate of your costs and savings. We help you **visualize** how your investment will save you money. Each of the **regular credits** are broken down and listed.

**Overview – 25 Years of Savings Potential**

**About regular credits:**

There are 2 primary sources of credit. Pennsylvania and New Jersey have instituted Solar Renewable Energy Credits (SREC) and there is a federal Investment Tax Credit (ITC).

**SRECs**

We use more than one reliable source to determine current credit values and estimate short term changes. All of our calculations are conservative.

**ITC**

The ITC is currently locked at 30% of the cost of a solar energy system. It is set to change after 2019, making a current investment qualified for the full amount.

**Request a Firm Commitment**

**Why is a site visit important?**

In order to make a firm commitment and provide a no-surprises final contract, a site inspection is mandatory. The Final Proposal must take all of the following into account:

- ➔ Confirm roof condition and orientation/slope.
- ➔ Suitability of home structure to support solar energy.
- ➔ Suitability and condition of all existing power components.
- ➔ A clear and written explanation of warranties and our commitment to lifetime support.

**The Exact Solar Difference**

**Our Final Proposal is our word**

Our aim is to give you honest and accurate information the first time around. A proposal includes the following:

- ONLY OUR SOLAR PROFESSIONALS** work with you on your project.
- NO PRESSURE TO SIGN** throughout the proposal process.
- HONEST, COMPLETE INFORMATION** — we stand behind our proposal. No spin. No omissions.
- CUSTOMERS COME FIRST** — top reviews and ratings are our aim. We are convinced an educated consumer is our best customer.
